

F Gas

What are F Gases?

F Gases are a family of chemicals that contain Fluorine. Most F gases are very powerful greenhouse gases which contribute to global warming if emitted to the atmosphere

Any Air Conditioning or Refrigeration system which holds 3Kgs or more must have at least 1 F Gas leak Test carried out by a Category 1 Safe handling of CFCs qualified Engineer per Annual.

It is the responsibility of the Operator /Owner (End User) to keep records of all equipment covered by the regulations and these records must record all additions and removals of refrigerant and leak tests of the systems.

It is estimated that 60% of all Air Conditioning Systems in the UK are still running on R22 a refrigerant that is no longer available the buy new after the 31st December 2009 only recovered refrigerant will be able to be used in these systems

RS Air Conditioning Ltd employ category 1 Qualified Engineers to ensure that you are compliant with F Gas Regulations,

As part of one of our Planned Preventative Maintenance Agreements

We carry out annual f Gas leak tests as well as a thorough Service and inspection which is designed to save you from breakdowns, reduce you running cost and save on energy use.

We also Take care of all your records and produce an F Gas log Book to prove that you are compliant with the Regulations.
